KiCad E.D.A. 8.0.9

Leaded EMIFI  
Three-terminal Capacitor type  
DSS6NE52A222p  
2200pF 80/-20%  
100Vdc 6A -25 to +85°C

A kind of a track is observed between the two PCB layers, as if it were another layer, but there is no certainty about that. The track seems to be used to delimit or isolate the EMI (ElectroMagnetic Interference) filters. They may have wanted to isolate the noise between digital and analog devices.
